
Are you considering using GARDE? Here are answers to some common questions:

1. **What is GARDE?** GARDE is a population clinical decision support platform and chatbot authoring platform.
2. **What can GARDE do?** GARDE can be used to address epidemiologic, health services, cancer, genetic and other research questions. It support a variety of study designs. Check out potential use cases that we put together here. If you have specific research ideas you want to discuss, the GARDE study team can be reached.
3. **Who developed GARDE?** GARDE was developed by an established biomedical informatics research team at University of Utah Health (UofUHealth) with funding from the National Cancer Institute (U24CA204800). The National Cancer Institute (NCI) supported a successful trial of GARDE at UofUHealth and New York University Langone Health (U01CA232826). With NCI support (U24CA274582), GARDE is being implemented at Medical University of South Carolina and Weil Cornell Medicine.
4. **How has GARDE been used before?** Research publications about GARDE can be found here.
5. **How much does GARDE cost?** GARDE is open source and free. The GARDE study team is funded by NCI to support its implementation. GARDE implementation and maintenance requires facility-based support from information security, biomedical informatics, EHR subject matter expertise, and genetic counseling. We estimate that technical implementation may require ~200 hours of support over the initial 8 months of use.
6. **Who should I talk to in my organization about using GARDE?** We recommend engaging individuals from the following groups early in implementation: Informatics, Information security, clinical care (including genetic counseling), research facilitation, and information technology (including healthcare system governance committees).
7. **What should I do now?** We've made more information available here about how to successfully implement and sustain GARDE in a variety of settings.
